

What's New in Avatier Identity Management Suite (AIMS) 9.5

AIMS 9.5 delivers new functionality that will immediately make your enterprise more efficient and secure. Most notably, AIMS now includes short message service (SMS) for two-factor authentication and identity verification. When you upgrade to AIMS 9.5, you gain the fullest capabilities of our software.

AIMS 9.5 improved features include:

AIMS Suite/Framework

- Aggregate risk score and risk radar show a user's risk in context to your organization and the request
- IIS optimization boosts application performance tenfold
- Enhanced access controls let you better manage your AIMS configuration
- Manage your Office 365 instance the same as an on-premise Exchange environment
- New branding configuration allows you to apply custom style sheets per AIMS module
- Improved performance for user collection as well as extended attribute collection
- Connector monitoring ensures connectors are running and sends an alert when a connector is down
- HTML based email templates
- Complete LANDesk web service ticketing integration
- Improved grid searching capabilities across the AIMS configuration suite, including the Approver and Workflow Administrator screens
- New tree controls boosts UI configuration performance

Password Station

- SMS authentication allows users secondary authentication via SMS notification
- SMS authentication integration with Help Desk systems
- SMS phone number verification during enrollment process
- SMS configuration for carrier based, a paid for SMS solution, or in-house SMS solutions
- Multiple questions for Help Desk to verify employee identity

Identity Enforcer

- Store intelligence visually presents information about the items in your business service catalog and IT store, such as the number of requests for an item, how long fulfillment takes and risks
- Service catalog risk scoring assigns risk scores to your systems, access privileges and user accounts to give a holistic view of a user's risk in your environment
- Multi-grantor functionality enables multiple levels of grantors required to perform actions on requests for assets and access to virtual systems
- Dynamic delegation based on complex hierarchies
- Quick links directly from the Approver and Workflow administrator screens to Identity Enforcer

- Quick links to the In Process, Access Request and Request History screens give you the details related to virtual and asset privileges
- Multi-request capabilities let you manage multiple direct reports with a single request
- Bulk cart requests provide the ability to submit multiple requests from a command line tool using a CSV file without having to manually make requests
- HR feed write back allows a stored procedure to update data in your feed and push data to other databases
- User Favorites empowers users to set items as favorites for quick access to their most requested items
- Business service catalog images stored in a database allow for inheritance from a parent container
- Segregation Of Duties (SOD) across privileges and roles

Reporting

- Custom 1-Click report capabilities allow you to run reports based on customer-specific requirements
- Enhanced AIMS configuration and usage analytics

Account Terminator

- Cancel Identity Enforcer requests when authoritative source user is disabled
- When deleting AD Users with nodes underneath them, delete their sub-nodes so you can remove the users
- Discard all Identity Enforcer role and privilege assignments on Delete
- Keep removal requests for grantor when an Enrollment Account is deleted
- Remove non-primary Active Directory groups on Disable
- Remove Active Directory Mail, Division, Manager, Webpage and Phone Number Attribute on Disable
- Revoke virtual privileges and assets when an Enrollment Account is Disabled

Compliance Auditor

- Compliance intelligence delivers analytics associated to open and assigned projects for better decision making
- Compliance intelligence integration with Identity Enforcer and Service Catalog risk scoring
- Reassign objects when they should be performed by someone else
- Delta audits streamline repetitive audits by performing audit activities on what changed
- Scheduled audits lets you schedule recurring audit projects on a regular basis
- Employee certification allows for employee self-certification whenever they need access assigned
- Manager certification gives managers the ability to audit and validate access for their direct reports
- Project diagnostic tracker lets project owners troubleshoot the collection status of their projects

Store Manager

- Import data collected by Identity Analyzer into Identity Enforcer and Service Catalog
- Improved performance for the optimized handling large volumes of data

Identity Analyzer

- Improved performance collection processes

Connectors

- Custom Scripting Connector
- GENBAND
- McAfee End Point Encryption
- Microsoft Lync
- Office 365
- SuccessFactors.com

Avatier Identity Management Suite (AIMS) 9.5

Mitigate risk with maximum control and convenience
