## Military grade self-service reset with integrated SSO.

Designed for the military. Single Sign-On for your enterprise battlefield.

### The High Cost of Passwords

*Slash help desk calls. Prevent weak passwords. Rest assured your organization is secure while you shift focus to other IT issues.*

### Uncover Hidden SaaS License Cost

*Do you know your total annual SaaS license cost? Leverage SSO to gain productivity while reducing SaaS license cost.*

### Total Password Management

*Total Password Management means getting the best of both worlds. SSR + SSO with integrated provisioning and risk management engine combines identity automation with license reduction.*

### Eliminate Password Reset Calls Now

For an enterprise, user accounts and passwords can number in the thousands, making password management a significant burden for IT organizations. Leading analyst firms estimate that manual password resets alone account for 30% of help desk requests.

Avatier Password Station™ self-service password reset eliminates these calls and synchronizes one strong password across your core applications and cloud services.

Our password automation enables your staff to focus on more strategic tasks.

### Reclaim Your SaaS License Cost with SSO

Industry experts agree 30% of all paid cloud application subscriptions are not being used. Reclaim your SaaS investment with Avatier's SSO integrated license management.

While other SSO solutions replicate your logon accounts and groups in the cloud, Avatier instantly leverages your enterprise identities to deliver the only true SSO experience.

Double Sign-on is not true SSO.

Avatier's Total Password Management Solution increases operational efficiency and security for any organization. Drive true hard dollar savings to your organization with automated self-service password reset and SaaS license management reduction with Avatier Single Sign-On™.

 Capital One realized its return on investment with Avatier's Password Station within six months.

## Enterprise Self-Service Password Reset

The proven way to eliminate your #1 help desk request.

Password Station hands the power to reset passwords back to the user, effectively eradicating the No. 1 reason for help desk calls, as well as a significant waste of time and money. Users may reset their passwords anytime and anywhere using a Web browser, automated phone system, RSA SecurID, and even voice recognition, leaving IT to tackle more strategic tasks. Password Station is used to verify a user's identity for help desk and IT staff. Ensure 100% usage with forced enrollment.

Reduce unnecessary costs from high volumes of helpdesk calls. Let users help themselves by resetting, synchronizing, and managing their passwords.

### Features

#### Proven Reset.

Self-service password management enables users to securely reset their forgotten password, unlock their account or reset their RSA SecurID PIN in a matter of seconds, without involving the helpdesk. Control is put squarely in the hands of users — 24 hours a day, all year.

#### Mass and Forced Enrollment.

Ensure 100% usage with forced enrollment. Leverage semi-private personnel data to auto-populate user security authentication enrollment questions. Questions may even be expired, forcing the user to select new secure questions.

#### Automatic Ticketing.

Avoid dual entry, run detailed reports and track actions in your ticketing system. Integrated ticketing automatically opens and closes all self-service password-related help desk tickets directly in your service management solution.

## True SSO with SaaS License Management

Increase productivity while reducing SaaS license cost.

Avatier SSO reduces SaaS licensing by enabling cost control over the actual number of cloud application subscriptions an organization uses. Avatier instantly leverages your enterprise identities to deliver the only true SSO experience. SSO comes fully integrated with all aspects of IAM for automating onboarding and off boarding workflow.

Uncover hidden SaaS license costs. Automatically, identify and report unused access to enterprise software and cloud subscriptions based on SSO controls.

### Features

#### True Directory Authentication.

Eliminate the headaches that come from duplicating and synchronizing enterprise logins and groups in the cloud. Leverage your native on-premise accounts, groups and organizational units to control access to enterprise web and cloud applications.

#### License Management.

Reduce SaaS licensing. Enable subscription controls and save. Automate reports and alerts regarding stale software licenses and cloud subscriptions.

#### Full IAM Integration.

Unify SSO as part of one fully integrated identity and access management (IAM) system. Automate SSO as part of onboarding and off-boarding. Use LDAP and HR directories to synchronize access to enterprise systems, cloud services, AS/400, IBM iSeries, and Unix.

## Innovative Identity Management Delivered

Avatier is defining the future by enabling business line managers to take control of the identity lifecycle and reduce risks through patented IT storefront technology with the industry's first integrated risk management engine. We automate and unify enterprise operations by standardizing business processes with an IT store. Our identity management-enabled service catalog creates a single system of record for access, asset and service requests providing full IT Audit transparency. Our easily extensible identity management system adapts to business changes through configuration rather than programming, which lowers operational costs and supports corporate governance. Avatier solutions dramatically decrease time to value and maximize operational efficiency.
