

Profiler for Legato Networker

Simplified Reporting for Complicated Backup Environments

The Profiler for Legato Console offers backup summaries that allow the administrator to quickly verify if all backups were successful and to act quickly if a problem arises.

KEY REPORTS

- Successful backups report** - Summarizes successful full or incremental backups including host name, client name, save set name, backup level, volume name, size (mb), start time, end time, duration and throughput.
- Client info report** - Provides asset information about clients per Legato server including host name, client OS type, time, NetWorker version, retention policy and browse policy.
- Device info report** - Provides configuration information about a backup device per Legato server including host name, logical name, time, logical type, jukebox device, date last cleaned, clean required and media type.
- Media DB info report** - Conveys the size of the Media database and available disk space. Provides an indication as to when there may be no disk space to hold the Media database upon which Legato will stop working by providing host name, time, index database size, media database size, free disk space, available space and total disk space.
- Pool info report** - Offers configuration information about each backup pool (a collection of backup volumes to which specific data has been backed up) per Legato server.
- Volume info report** - Summarizes the status of the volumes per Legato server.
- Backup exceptions report** - Summarizes exceptions occurring during a backup job; conveys which job failed and why.
- Storage node tape report** - Summarizes the time and amount of data written to each tape per jukebox.

TECHNICAL SPECIFICATIONS

Server Requirements
 Sun Microsystems Solaris
 Microsoft Windows 2000 Server or Professional
 Memory Needed: 512 MB
 Disk Space: 1 GB
 Console: Internet Explorer or Netscape/Mozilla

Support for:
 Legato Networker 6.0, 6.1, 6.2, 7.0, 7.1, 7.2 (Windows, Solaris, Linux, AIX, Tru64)

Centralized Web Console

Profiler for Legato Networker is a web-based backup reporting and analysis solution providing a consolidated, centralized view of all backups across one or multiple Legato Networker backup servers in relation to the entire storage network.

Real Time Monitoring Provides Quick, Accurate Data

Profiler for Legato Networker offers real time monitoring of all backup jobs as they progress through the backup window. Profiler for Legato Networker enterprise-wide "Backup Console" provides storage managers with a quick and easy consolidated picture of all backups for a single day and summarizes the status of backups across the enterprise, including backup status, exceptions, size of backups and trending of backup size.

Save Time By Simplifying Report Consolidation

Storage Administrators can save hours each month with off-the-shelf reports, including post-backup analysis reports and enterprise-level backup comparison reports. Reports can also be easily customized using a report wizard. Profiler for Legato also rates more than 100 SNMP traps from Legato Networker and provides suggested corrective actions.

Expands and Scales to Meet Future Needs

Profiler for Legato Networker is a module of the Profiler Rx Suite. Whether you purchase multiple backup vendors or wish to monitor your DAS, NAS and SAN alongside backup data, the Storage Profiler solution modules are integrated and scalable for easy deployment.
